March 2016

RAISING THE BAR

OILCO finished 2015 with both a record setting sales year and a record setting production year for large diameter swivel joints.

Since 1935, OILCO has maintained an ever increasing manufacturing pace. As 2015 drew to a close, the blueprint for a complete line was drafted. OILCO will now offer the 90 Series in 2" through 24", marking the widest scope of swivel joints available by a US manufacturer.

INDUSTRY ANNOUNCEMENT: OILCO'S NEW NAHAD MEMBERSHIP

Launching 2016 in a strong way, OILCO announced its most recent industry membership with NAHAD. With a vigorous focus on the design and manufacturing of the largest selection of domestically available swivel joints, the alignment of OILCO and NAHAD could never

come never come at a more perfect time.

OILCO brings three decades of manufacturing expertise to the hose industry. Originally centered on cooling lids in the steel mills on the eastern coast of the United States, OILCO helped provide leading steel manufacturers like Nucor and Keystone with not only reliable, long lasting furnace hose connections, but also integral water treatment swivel joints and transition unions.

Swivel joints designed & engineered to withstand the modern demands of heavy industry.

Joining with NAHAD, OILCO has increased its focused on taking the large diameter swivel joint market to offer the next level of performance and reliability. The 90 Series will be the benchmark of quality for every member of the NAHAD family, just as it has ours.

GROWTH:

OILCO'S MANUFACTURING PRIORITY

In 2013, OILCO launched an ambitious three-year project to enlarge the manufacturing facility by 300%, increase production levels by 200% and enlarge the swivel joint line dimensionally by 100%. In March of 2016, that plan will see its final phase. The introduction of a third Haas ST-40 will complete the machining footprint of OILCO, complementing the already vast array of milling machines and traditional metal works equipment.

Expansion of the five-acre facility is nearing its completion and OILCO has begun production on the pinnacle 90/190 Series unit - the 24" Split Flange Swivel Joint.

OILCO is confident the 90/190 Series Swivel Joint family will prove to be the strongest, most reliable and best performing unit available to the petroleum and heavy industry worldwide.
